Normal Peripheral Blood CD4+ T Lymphocytes

Simplify Your Research, Just Thaw and Culture

Poietics® Human CD4+ T Lymphocyte Cells are isolated from normal peripheral blood using negative immunomagnetic selection. CD4+ T lymphocytes play a central role in regulating the cell-mediated immune response to infection. These cells are often known as “helper” T cells, as they act on other cells of the immune system to promote various aspects of the immune response, including immunoglobulin isotype switching and affinity maturation of the antibody response, macrophage activation, and enhanced activity of natural killer (NK) cells and cytotoxic T cells (CTL).

Lonza offers the convenience of guaranteed, cell culture products. Avoid the hassle of acquiring tissue and isolating your own cells with variable results. We offer superior quality and cost-effective peripheral blood human CD4+ T cells.

Features:
- Purity >90%
- ≥10 million viable cells
- Multiple donors typically available
- LGM™-3 Lymphocyte Growth Medium-3 recommended for culture
- Donors are screened for general health and test negative for HIV-1, Hep B and C viruses

Research Applications:
- HIV/AIDS
- Autoimmune disease
- Inflammation
- Cancer
- Cellular immunity
- Bacterial infection/Disease
### Ordering Information

#### Normal Peripheral Blood CD4+ T Lymphocytes

<table>
